Executive Summary

The Environment (Northern Ireland) Order 2002, requires North Down Borough Council to undertake Air Quality Reviews and Assessments in their local areas and to meet the local air quality targets and objectives set out in the UK National Air Quality Strategy (2000). The production of an annual air quality report is now a statutory duty for all local authorities. The process is set out in the Department of Environment's Local Air Quality Management Policy Guidance LAQM PGNI (03).

This report is prepared by the North Down Borough Council to meet its statutory obligations under the above regime and has been prepared using the recommended template. The report has been prepared in accordance with the policy guidance mentioned above and with the relevant technical guidance Local Air Quality Management (LAQM.TG(09)

The Borough of North Down is geographically one of the smallest Council areas in Northern Ireland, but is regarded as economically one of the wealthiest. Population has increased steadily over recent years and is now in the region of 79,500. Air Quality in North Down is generally good as there is good ventilation from sea breezes. There are few industrial processes in the area that are significantly detrimental to air quality and heavy fuel oil is not widely used for heat generation. However, there are a number of very busy trunk roads in the area the busiest being the A2 commuter route from Bangor to Belfast with average daily traffic flows of 44,000 vehicle movements per day at Holywood. The A2 has now been identified as the only area of concern with relation to Air Quality, for Nitrogen Dioxide and PM10. All monitoring sites are now located at relevant exposure along this main arterial route to Belfast., All present monitoring within the Borough indicates that the objectives in the air quality strategy are not currently being exceeded, and a detailed assessment is not required for any of the pollutants

Introduction

Description of Local Authority Area

The Borough of North Down is geographically one of the smallest Council areas in Northern Ireland, but is regarded as economically one of the wealthiest. Population has increased steadily over recent years and is now in the region of 79,500.

Air Quality in North Down is generally good as there is good ventilation from sea breezes. There are few industrial processes in the area that are significantly detrimental to air quality and heavy fuel oil is not widely used for heat generation

There are a number of very busy trunk roads in the area as indicated on the above map. Much of the monitoring work in the area is in relation to NO₂ and PM₁₀ at relevant locations particularly in relation to the A2 to Belfast between Ballyrobert and Holywood.

Studies in relation to solid fuel use were carried out in 2002 to assess the risk of exceeding the air quality objectives in relation to SO₂ and PM₁₀.

1.2 Purpose of Progress Report

Progress Reports are required in the intervening years between the three-yearly Updating and Screening Assessment reports. Their purpose is to maintain continuity in the Local Air Quality Management process.

They are not intended to be as detailed as Updating and Screening Assessment Reports, or to require as much effort. However, if the Progress Report identifies the risk of exceedence of an Air Quality Objective, the Local Authority (LA) should undertake a Detailed Assessment immediately, and not wait until the next round of Review and Assessment.

1.3 Air Quality Objectives

The air quality objectives applicable to LAQM in Northern Ireland are set out in the Air Quality Regulations (Northern Ireland) 2003, Statutory Rules of Northern Ireland 2003, no. 342, and are shown in Table 1.1. This table shows the objectives in units of microgrammes per cubic metre $\mu g/m^3$ (milligrammes per cubic metre, mg/m^3 for carbon monoxide) with the number of exceedences in each year that are permitted (where applicable).

Table 1.1 Air Quality Objectives included in Regulations for the purpose of Local Air Quality Management in Northern Ireland.

| Pollutant | Concentration | Measured as | Date to be achieved by |
|-----------------------------------|---|------------------------|------------------------|
| Benzene | 16.25 µg/m³ | Running annual mean | 31.12.2003 |
| | 3.25 µg/m ³ | Running annual mean | 31.12.2010 |
| 1,3-Butadiene | 2.25 μg/m ³ | Running annual mean | 31.12.2003 |
| Carbon monoxide | 10.0 mg/m ³ | Running 8-hour mean | 31.12.2003 |
| Lead | 0.5 μg/m ³ | Annual mean | 31.12.2004 |
| | 0.25 μg/m ³ | Annual mean | 31.12.2008 |
| Nitrogen dioxide | 200 µg/m³ not to be exceeded more than 18 times a year | 1-hour mean | 31.12.2005 |
| | 40 μg/m ³ | Annual mean | 31.12.2005 |
| Particles (PM10) (gravimetric) | 50 μg/m³, not to be exceeded more than 35 times a year | 24-hour mean | 31.12.2004 |
| | 40 μg/m³ | Annual mean | 31.12.2004 |
| Sulphur dioxide | 350 µg/m³, not to be exceeded more than 24 times a year | 1-hour mean | 31.12.2004 |
| | 125 µg/m³, not to be exceeded more than 3 times a year | 24-hour mean | 31.12.2004 |
| | 266 µg/m³, not to be exceeded more than 35 times a year | 15-minute mean | 31.12.2005 |

1.4 Summary of Previous Review and Assessments

North Down Borough Council has completed the following reviews and assessments of air quality in earlier rounds of the assessment process:

| Stages Completed | Exceedences Identified / Predicted | Areas Affected | AQMA's Declared |
|----------------------|---------------------------------------|--|-----------------|
| Stage 1 2001 | PM10, SO2, NO2 | A2 Bangor to Belfast Road, Clandeboye Road Area. | No |
| Stage 2&3 2004 | PM10, SO2, NO2 | A2 Bangor to Belfast Road, Clandeboye Road Area. | No |
| Progress Report 2005 | None | A2 Bangor to Belfast Road, Clandeboye Road Area. | No |
| USA 2006 | None | A2 Bangor to Belfast Road, Clandeboye Road Area | No |
| Progress Report 2007 | None | A2 Bangor to Belfast Road, Clandeboye Road Area | No |
| Progress Report 2008 | NO2 | A2 Bangor to Belfast Road, | No |
| USA 2009 | None | A2 Bangor to Belfast Road, | No |
| Progress Report 2010 | None | A2 Bangor to Belfast Road, | No |
| Progress Report 2011 | None | A2 Bangor to Belfast Road, | No |
| USA 2012 | None | A2 Bangor to Belfast Road, | No |
| Progress Report 2013 | None | A2 Bangor to Belfast Road, | No |

Progress Report

2 New Monitoring Data

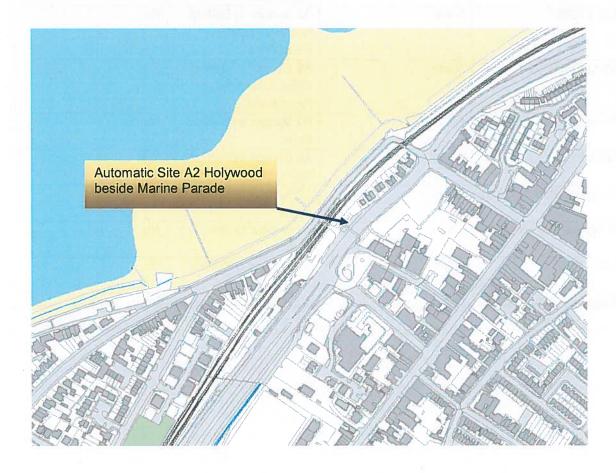

2.1 Summary of Monitoring Undertaken

2.1.1 Automatic Monitoring Sites

North Down Borough Council has one automatic site on the A2 Holywood, monitoring NO2 and PM10. AQDM (Air Quality Data Management) were contracted to carry out the QA/QC for the site and the site audits were carried out by NPL (National Physical Laboratory). This includes data handling, ratification of data and 6monthly site audits. The Eastern Group Air Quality technical officer visits the site on a weekly basis and calibrates the equipment on a fortnightly programme.

See Appendix A: Details of Quality Assurance and Quality Control

2.1.2 Non-Automatic Monitoring

North Down Borough Council presently has four NO₂ diffusion tube sites positioned along the main arterial route the A2 into Belfast. There is also a co-location study carried out at the Holywood automatic site. Two new sites were commenced in March 2012 at Craigantlet crossroads, due to proposals to widen this alternative route into Belfast close to residential property. In addition to these in February 2013 a tube was located in High Street Holywood beside new residential apartments, creating relevant exposure in this area. High street in Holywood has a tendency to become quite congested as this is the main shopping area within the town.

All the diffusion tubes have been sited in accordance with the technical guidance. The bias adjustment factor from the local Holywood co-location study is **0.79** and the results from this have been submitted to the national data base.

A decision was made to apply a bias adjustment factor of **0.80** to the diffusion tubes. This was derived from the national bias adjustment Factor Spread Sheet version number 03/14, information on the decision to use this bias adjustment factor and details of the QA/QC of the diffusion tubes can be found in appendix A.

2.2 Comparison of Monitoring Results with Air Quality Objectives

No exceedences of the AQS objectives have been identified from the monitoring data collected since the last Update and Screening Assessment. All monitored pollutant concentrations have been well below their respective air quality objective limits.

2.2.1 Nitrogen Dioxide

In the following section results are presented for NO₂ at the automatic and diffusion tube sites and compared with the objective. All sites meet the objective.

Automatic Monitoring results

Table 2.3a presents the annual mean concentrations of NO₂ determined at the automatic site in 2013 from the hourly measurements.

Figure 2.3 Trends in Annual Mean Nitrogen Dioxide Concentration Measured at Automatic Monitoring Sites.

exceedences of the hourly mean this was consistent of periods of unsettled weather. A high number of exceedences of the hourly Results have been consistent since installation of the automatic station. In 2009 and 2010 and 2013 there were a small number of mean were recorded in 2012, due to severe weather conditions a number of cars parked around the monitoring station during this period to gain access to the train, it is believed this contributed to the high hourly means.

Table 2.3a Results of Automatic Monitoring for Nitrogen Dioxide: Comparison with Annual Mean Objective

Diffusion Tube Monitoring Data

Results of the NO₂ diffusion tube sites, situated within the Borough are shown below in table 2.4

They are located at relevant exposure and sited in accordance with the technical guidance.LAQM.TG(09)

These tubes continue to demonstrate that the objective for NO₂ is not being exceeded at these sensitive locations.

A co-location study has been carried out at the Holywood automatic site, creating a local bias of 0.73 the results of this have been submitted to be included in the the next update (June 2014) to the LAQM data base.

North Down Borough Council is located within the Eastern Group area of the Provence. There were 4 co-location studies carried out within this area in 2012 and the average of these was 0.75, a decision was made in 2012 to use that factor.

However as the number of co-location studies within the Eastern Group area in 2013 was reduced to two, a decision was made to use the national figure of 0.8.from the 03/14 version data base where 28 studies were available.

Details of the QA/QC for the diffusion tubes and the reason for the use of the bias adjustment factor can be found in appendix A

Figure 2.4 Trends in Annual Mean Nitrogen Dioxide Concentration Measured at Diffusion Tube Monitoring Sites.

NO₂ diffusion tube results have remained consistent any annual variation is more likely to be as a result of climatic conditions rather than changes in emissions.

Progress Report 21

2.2.2 PM₁₀

Automatic monitoring of PM10 using a TEOM carried out at the Holywood site, continued in 2013 to be below the air quality objective. AQDM were contracted to carry out the QA/QC for the site and ratify the data. Site audits were carried out by NPL. Summaries of this data, with regard to annual and hourly mean objectives, are presented below. The TEOM data has been corrected using Volatile Correction Model

Reports from the ratified data and the QA/QC applied can be found in appendix A.

Figure 2.5 Trends in Annual Mean PM₁₀ Concentrations

PM10 has remained consistently low in Holywood

2.2.3 Sulphur Dioxide

North Down borough Council did not carry out any monitoring of SO2 in 2013

2.2.4 Benzene

No monitoring of Benzene is carried out.

2.2.5 Other pollutants monitored

In 2013 Nitrogen Dioxide and PM₁₀ were the only pollutants monitored

2.2.6 Summary of Compliance with AQS Objectives

North Down Borough Council Council has examined the results from monitoring in the Council area. Concentrations are all below the objectives; therefore there is no need to proceed to a Detailed Assessment.

3 New Local Developments

North Down Borough Council confirms that there are no new or newly identified local developments which may have an impact on air quality within the Local Authority area.

North Down Borough confirms that all the following have been considered:

- Road traffic sources
- Other transport sources
- Industrial sources
- Commercial and domestic sources
- New developments with fugitive or uncontrolled sources.

4 Planning Applications

There have been no new planning applications approved or pending that may have an impact on air quality

Progress Report 25

5 Conclusions and Proposed Actions

5.1 Conclusions from New Monitoring Data

The 2013 monitored data for NO2 and PM10 has been assessed and has indicated no exceedences of the national air quality objectives. It is therefore not necessary to proceed to a detailed assessment, however monitoring will continue at key locations in 2014 to allow for comparison in future rounds of review and assessment.

5.2 Conclusions relating to New Local Developments

North Down Borough Council has found no new or significant new developments to have likely impacts on air quality.

5.3 Proposed Actions

This 2014 progress report for North Down Borough Council has identified there is no need to proceed to a detailed assessment for any of the pollutants.

Monitoring sites are sited in accordance with the guidance and at relevant exposure, no new significant sites have been identified.

North Down Borough Council intends to continue monitoring NO2 and PM10 in 2014 and submit an update and screening assessment in 2015.

Appendices

Appendix A: QA/QC Data

Appendix A: QA/QC Data of automatic sites

North Down Borough Council commissioned AQDM (Air Quality Data Management) to provide the QA/QC of the automatic measurements of NO2 and PM_{10} from their Holywood A2 site. Local authority staff act as the local site operator and visit the sites on a weekly basis carrying out any manual calibration or filter changes required. Audits of the site were carried out by NPL (National Physical Laboratory). on a six monthly basis.

Supportingu were employed to service and maintain the analysers.

Produced by AQDM on behalf of Eastern Group

NORTH DOWN HOLYWOOD A2 2013

These data have been fully ratified by AQDM to LAQM TG(09) standards

QA/QC of Diffusion Tube Monitoring

The NO₂ tubes are supplied by ESG (Environmental Scientific Group) in Didcot Oxfordshire. Their preparation method is listed below.

Nitrogen Dioxide Diffusion Tube Analysis Report

The samples have been analysed in accordance with ESG's standard operating procedure HS/WI/1015 issue 15. This method meets the guidelines set out in DEFRA's 'Diffusion Tubes for Ambient NO₂ Monitoring: Practical Guidance.'

The tubes were prepared by spiking acetone:triethanolamine (50:50) onto the grids prior to the tubes being assembled. The tubes were desorbed with distilled water and the extract analysed using a segmented flow autoanalyser with ultraviolet detection. In the WASP intercomparison scheme for comparing spiked Nitrogen Dioxide diffusion tubes, Scientifics is currently ranked as a Category Good laboratory. This result can be found on the LAQM Support Web site http://laqm.defra.gov.uk/diffusion-tubes/precision.html

Diffusion Tube Bias Adjustment Factors

North Down Borough Council lies within the Eastern Group area. There are five neighbouring councils within the group. In 2013 only North Down Borough Council and Castlereagh Bourough Council within the group carried out co-location studies. The bias adjustment factor calculation of these is shown below.

They were all calculated using the R&A support precision and accuracy spreadsheet.

http://lagm.defra.gov.uk/bias-adjustment-factors/co-location-data.html

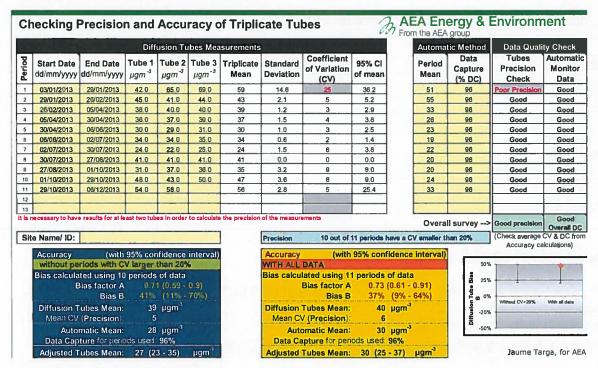

and in accordance to current guidance summarized in the

Technical Guidance LAQM.TG(09).

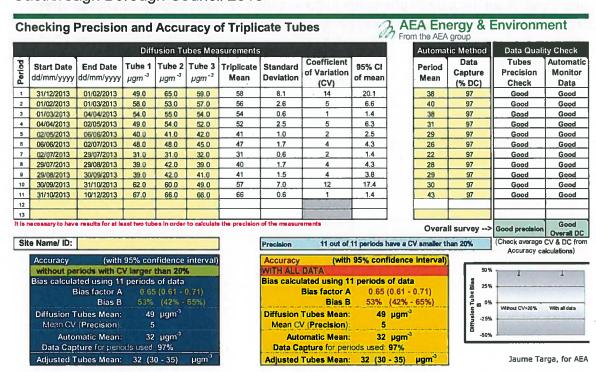

These results have been submitted for inclusion in the national bias adjustment factor database.

Factor from Local Co-location Studies (if available)

North Down Borough Council 2013

Castlereagh Borough Council 2013

Progress Report

The local bias adjustment factor from the co-location study carried out at the A2 Holywood site in North Down Borough Council is **0.73**, however a decision was made to use the national bias adjustment factor of **0.80**.

NO₂ diffusion tube results, bias applied **0.80**

| - | 2009 | 2010 | 2011 | 2012 | 2013 |

Discussion of Choice of Factor to Use

A decision was made to use the national bias adjustment factor for Environmental Scientific Group.which is **0.80**

This figure can be found on the LAQM support web site http://lagm.defra.gov.uk/bias-adjustment-factors/national-bias.html

In 2013 only 2 local co-location studies were carried out within the area (North Down bias 0.73 and Castlereagh bias 0.65) due to the large variation in these and as 28 studies were included in the national survey, the national bias was deemed to be more accurate.
